Md. Mozammel Hoque

Independent Management Researcher | Originator of Human Energy Economics (HEE)

Human Energy Economics (HEE)

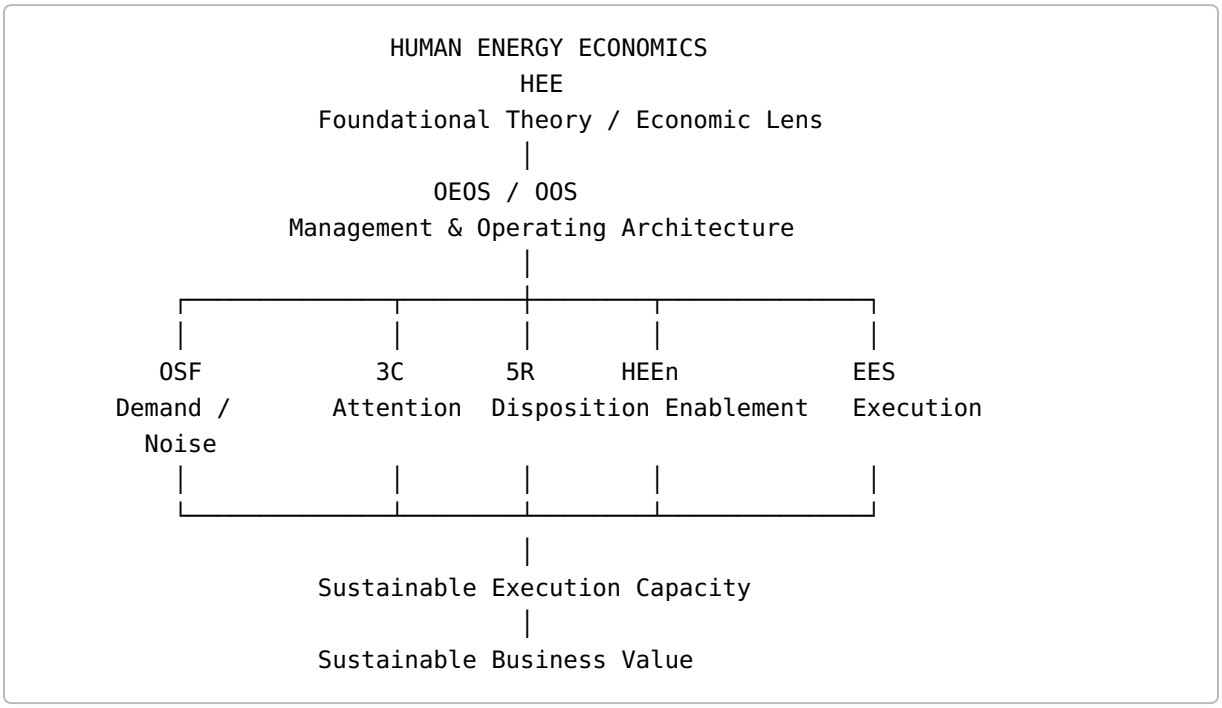

A theory of organizational capacity and sustainable execution.

Human Energy Economics examines how organizations preserve, develop, connect, enable, and apply the capacity required to produce results repeatedly without degrading their future ability to execute.

Core proposition: *Extraction depletes. Cultivation compounds.*

The HEE Ecosystem

The HEE ecosystem consists of **six complementary frameworks** supported by a broader management and operating architecture.

Framework Roles

Framework	Role
HEE	Foundational theory and economic lens
OSF	Reduces unnecessary recurring operational demand
3C	Directs contextual attention toward Source, Dependency, or Constraint
5R	Determines the disposition of recurring demand
HEEn	Enables available Human Energy and capability to become effective application
EES	Manages reliable, adaptive, sustainable execution

The broader HEE operating architecture also includes **supporting mechanisms and architectural components** for Human Energy diagnosis, recovery, development, management, and capability connection:

HEA · HERF · HEDP · HEMS · Capability Interconnection

The Core Logic

> **HEE explains. OEOS/OOS orchestrates. OSF reduces unnecessary recurring operational demand. 3C directs contextual attention. 5R determines disposition. HEEn enables application. EES manages execution.**

These mechanisms are **complementary, not a single mandatory sequence**. Their use depends on the organizational condition, problem, and point of intervention being examined.

Shared Prioritization Heuristic

Several frameworks in the HEE ecosystem — **HEE, OSF, 3C, 5R, EES, and HEEn** — use a common heuristic for directing attention when multiple conditions compete for limited capacity:

> **Priority = Urgency × Interdependence × Value Impact**

This is **shared ecosystem infrastructure**, not a formula independently derived by any single framework. Each framework document references it rather than deriving it separately.

Interdependence refers to the magnitude of relationships affecting movement, action, or outcomes. It is distinct from **3C's Dependency** context — a specific condition in which action, decision, or execution depends upon another person, function, approval, system, resource, or condition. The two terms should not be treated as interchangeable.

The heuristic is a **management aid, not a validated mathematical law**. Its purpose is to help direct attention toward conditions that are urgent, materially interdependent with other work, and significant in value impact — rather than automatically addressing the largest visible problem.

Where to Start

Start with HEE for the foundational theory, then explore the framework most relevant to the organizational condition or execution problem being examined.

1. **Human Energy Economics (HEE)** — Foundational theory and economic lens
2. **Operational Silence Framework (OSF)** — Operational noise and unnecessary recurring demand
3. **3C Strategic Approach** — Strategic attention and context
4. **5R Cascade Framework** — Disposition of recurring demand
5. **Human Energy Enablement (HEEn)** — Organizational enablement and effective application
6. **Execution Excellence System (EES)** — Execution management and continuous improvement

---

The Central Question

> **How can organizations produce results repeatedly without degrading the capacity required to produce them?**

This question sits at the center of the HEE ecosystem.

The Six Frameworks

HEE — Human Energy Economics

A theory of organizational capacity and sustainable execution.

HEE provides the foundational economic lens for understanding Human Energy, capability, connection, enablement, execution, organizational drain, Sustainable Execution Capacity, and Sustainable Business Value.

→ Explore HEE

OSF — Operational Silence Framework

Stop managing chaos. Start engineering silence.

OSF focuses on unnecessary recurring operational demand and operational noise that consume attention, time, coordination, and Human Energy.

→ Explore OSF

3C — Strategic Approach

Direct attention to the condition that matters most.

3C directs organizational attention toward the **Source, Dependency, or Constraint** most relevant to improving effective application and execution.

→ Explore 3C

5R — Cascade Framework

Determine what should happen to recurring demand.

5R provides a tactical decision method for recurring demand:

REMOVE → REDUCE → REPLACE → RE-ENGINEER → RETAIN

→ Explore 5R

HEEn — Human Energy Enablement

Enable available Human Energy and capability for effective application.

HEEn addresses the organizational conditions that allow available Human Energy and capability to become effective application and sustainable execution.

→ Explore HEEn

EES — Execution Excellence System

Manage execution as a continuously improving system.

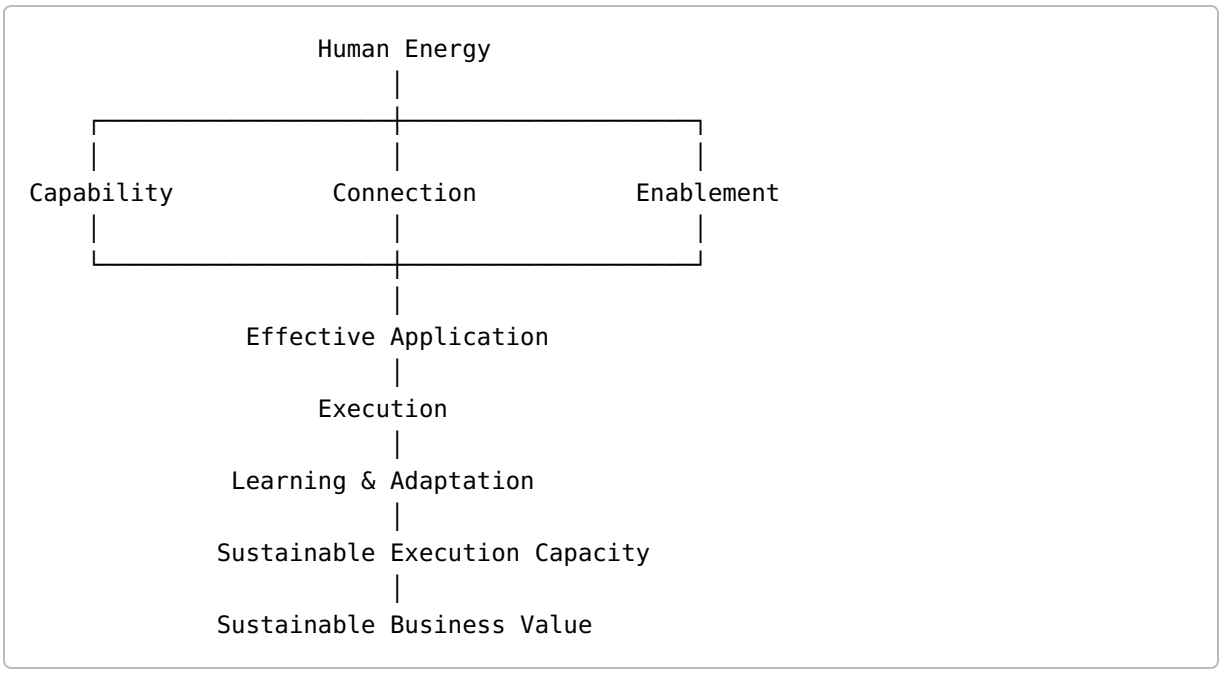

EES manages the system through which intent and decisions become coordinated action, results, learning, adaptation, and stronger future execution capability.

→ Explore EES

From Capacity to Value

The HEE ecosystem connects organizational potential and conditions to sustainable execution and value. The relationship among these elements is **conceptual and interdependent — not a fixed sequence every organization must follow in the same order**.

The following hub-and-spoke representation is the **authoritative ecosystem relationship representation**. It is not a mandatory intervention sequence.

Capability = Potential.
Capacity = Application.

Human Energy, Capability, Connection, and Enablement interact with one another rather than occurring in strict sequence — a condition may involve several of these simultaneously. Effective Application, Execution, and the outcomes that follow represent the conversion of that interacting foundation into results.

The objective is not simply to improve today's output.

It is to strengthen the capacity required for tomorrow's execution.

Repositories

Framework	Repository
HEE	human-energy-economics
OSF	operational-silence-framework
3C	3c-strategic-approach
5R	5r-cascade-framework
HEEn	human-energy-enablement

Framework	Repository
EES	execution-excellence-system

Status

The six frameworks are maintained as **Version 1.0 canonical editions** within the HEE ecosystem.

The conceptual architecture is established.

Ongoing work focuses on **documentation, application, research, measurement development, and empirical validation.**
