Md. Mozammel Hoque

Independent Management Researcher | Originator of Human Energy Economics (HEE)

Human Energy Economics (HEE)

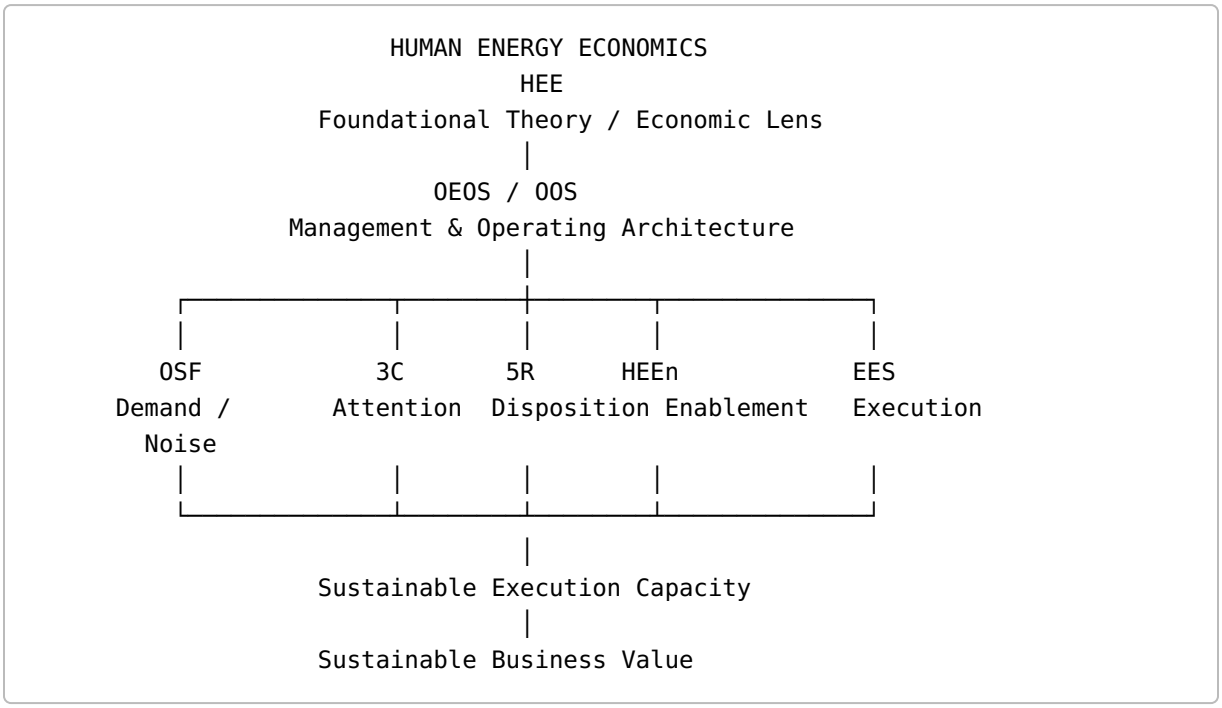

A theory of organizational capacity and sustainable execution.

Human Energy Economics examines how organizations preserve, develop, connect, enable, and apply the capacity required to produce results repeatedly without degrading their future ability to execute.

Core proposition: *Extraction depletes. Cultivation compounds.*

The HEE Ecosystem

The HEE ecosystem consists of **six complementary frameworks** supported by a broader management and operating architecture.

Framework Roles

Framework	Role
HEE	Foundational theory and economic lens
OSF	Reduces unnecessary recurring operational demand
3C	Directs strategic attention toward Source, Dependency, or Constraint
5R	Determines the disposition of recurring demand
HEEn	Enables available Human Energy and capability to become effective application
EES	Manages reliable, adaptive, sustainable execution

The broader HEE operating architecture also includes supporting mechanisms for Human Energy diagnosis, recovery, development, and management:

HEA · HERF · HEDP · HEMS

The Core Logic

> **HEE explains. OEOS/OOS orchestrates. OSF reduces unnecessary demand. 3C directs attention. 5R determines disposition. HEEn enables application. EES manages execution.**

These mechanisms are **complementary**, not a single mandatory sequence.

Where to Start

Start with HEE for the foundational theory, then explore the framework most relevant to the organizational condition or execution problem being examined.

1. **Human Energy Economics (HEE)** — Foundational theory and economic lens
2. **Operational Silence Framework (OSF)** — Operational noise and unnecessary recurring demand
3. **3C Strategic Approach** — Strategic attention and context
4. **5R Cascade Framework** — Disposition of recurring demand
5. **Human Energy Enablement (HEEn)** — Organizational enablement and effective application
6. **Execution Excellence System (EES)** — Execution management and continuous improvement

---

The Central Question

> **How can organizations produce results repeatedly without degrading the capacity required to produce them?**

This question sits at the center of the HEE ecosystem.

The Six Frameworks

HEE — Human Energy Economics

A theory of organizational capacity and sustainable execution.

HEE provides the foundational economic lens for understanding Human Energy, capability, connection, enablement, execution, organizational drain, Sustainable Execution Capacity, and Sustainable Business Value.

→ Explore HEE

OSF — Operational Silence Framework

Stop managing chaos. Start engineering silence.

OSF focuses on unnecessary recurring operational demand and operational noise that consume attention, time, coordination, and Human Energy.

→ Explore OSF

3C — Strategic Approach

Direct attention to the condition that matters most.

3C directs organizational attention toward the **Source, Dependency, or Constraint** most relevant to improving effective application and execution.

→ Explore 3C

5R — Cascade Framework

Determine what should happen to recurring demand.

5R provides a tactical decision method for recurring demand:

REMOVE → REDUCE → REPLACE → RE-ENGINEER → RETAIN

→ Explore 5R

HEEn — Human Energy Enablement

Enable available Human Energy and capability for effective application.

HEEn addresses the organizational conditions that allow available Human Energy and capability to become effective application and sustainable execution.

→ Explore HEEn

EES — Execution Excellence System

Manage execution as a continuously improving system.

EES manages the system through which intent and decisions become coordinated action, results, learning, adaptation, and stronger future execution capability.

→ Explore EES

From Capacity to Value

The HEE ecosystem connects organizational potential and conditions to sustainable execution and value:

```
Human Energy
      ↓
Capability
      ↓
Connection
      ↓
Enablement
      ↓
Effective Application
      ↓
Execution
      ↓
Learning & Adaptation
      ↓
Sustainable Execution Capacity
      ↓
Sustainable Business Value
```

> **Capability = Potential.**
> **Capacity = Ability to mobilize and apply potential.**

The objective is not simply to improve today's output.

It is to strengthen the capacity required for tomorrow's execution.

Repositories

Framework	Repository
HEE	human-energy-economics
OSF	operational-silence-framework
3C	3c-strategic-approach
5R	5r-cascade-framework
HEEn	human-energy-enablement
EES	execution-excellence-system

Status

The six frameworks are maintained as **Version 1.0 canonical editions** within the HEE ecosystem.

The conceptual architecture is established.

Ongoing work focuses on **documentation, application, research, measurement development, and empirical validation.**
